Game Design - Peer Review Feedback

Crisis Protocol - Group 03
Yusen Guo, Ruowen Lou, Mengting Bao, Yifei Tao

1. 1. Do you clearly realize that collecting resource is preparing for the crisis discussion and contribution? and any suggestions for that?

Feedback:

1-1: the controls were confusing, and i didn't know what crisis was coming or what it meant to "prepare", ie do i need money, food, community, etc.? i had limited indicators as to what to prepare for the crisis.

1-2: I think that was clear. What was a bit confusing is how the resources contribute to surviving the crisis.

1-3: I dont think it was super clear at the beginning of the game that we were preparing for a crisis specifically. It could be helpful to have more user prompting at the beginning.

2. 2. Do you think the station buildings are clear or not? Easy to know how to combine and form resource? and any suggestions for that?

Feedback:

2-1: was unclear, perhaps some sort of tutorial for onboarding.

2-2: The stations are clear. I wasn't clear how to combine resources or how combining resources contributed to surviving the crisis.

2-3: The stations aren't super clear differentiated between other buildings. Its super clear though which resources are needed to be put together, but not really why.

3. 3. Can you read and understand and rule after the first scenery? and any suggestions for that?

Feedback:

3-1: i was confused by the rules and how to "win" the game. even though we had starting values, i was confused by what my "individual goals" were as well.

3-2: Even after reading the directions it still took me awhile to understand the mechanics of the game. I didn't know if I was supposed to interact with a stations to get a resource or if the resource just appears spontaneously and I pick it up.

3-3: rules were clear but i was still confused -- this couldve been user error though because i couldnt really see the screen well.

4. 4. About the time limit in the period of collecting resource, do you think the 6min is resonable or not? How many minutes do you think is good?

Feedback:

4-1: It was reasonable, i needed it to figure out how to play the game.

4-2: I think the time limit is fine.

4-3: Time limit def reasonable !

5. 5. About the time limit in the period of crisis discussion, do you think the 2min is resonable or not? How many minutes do you think is good?

Feedback:

5-1: I don't have opinions on the time limit.

5-2: Yes i liked that it was 2 min and kind of made it stressful for everyone to allocate resources because it conveyed a crisis situation.

6. 6. Do you think how to improve the game generally?

Feedback:

6-1: Clearer instructions + more well defined incentives i.e. what am i competing for, what was the limiting resources?

6-2: Maybe combining resources should result in the creation of a new resource.

6-3: Clearer UI for different stations and more instructions at beginning

2) NOTES FOR IMPROVEMENT

2-1 Clear Rules

- 1. Station input area is not clear.
- 2. Combination flow and where to get the raw resource are not clear. The difference between different stations.
- 3. Resource difference not clear. Screen is small, not easy to distinguish different resource.
- 4. Park, make it clear and show or hint the Fame icon.
- 5. The difference of Station and Work place is not clear.
- 6. After crisis, outcome show the fail or success.
- 7. Competition and cooperation between players. Players are not clear about what they are competing for and what they should preparing for the crisis. Maybe before gathering resource, there is one round crisis to be a newer tutorial.
- 8. Some players don't know they need to work for a resource.

2-2 Progress for Future

- 1. Upgrade Station - Upgrade stations, only influence the speed and number of outcome resource.
- 2. Upgrade crisis and de-grade crisis - the broken station still works just slow, some crisis will influence the upgrades or de-grade for stations.
- 3. Multi-player camera tracking showing zoom in site or 4 different camera showing the crisis in the open world map.
- 4. Gif motion for building before crisis to show the need of resource and game stages.
