1) GAME LINK

https://momoko0719.github.io/ocean-guardian-minigame/ocean_game.html

2) RULE & INSTRUCTION

3) GAMEPLAY HYPOTHESIS

The game is trying to observe the players' different behaviors.

- 1.** The first bias is that Fish and Ponds have no ownship before players collect fishs. That creates more possibilities for players to steal and scramble fish and guard up ponds.
- 2.** The second bias is that the resource used to creat pond is genarated from fish releasing. This would provide a conflict and balance judgement between the short-term profits and sustainable profit.
- 3.** The third bias is two different ways to sell fish. Cooking takes more time than selling directly, but earning more money. More time spent on cooking means more risk on being stelon.
- 4.** The hidden bias is that the number of stealing and releasing is counted. When the game ends, bonus and ponishment would be conducted according to players' stealing and releasing times, whicih may influence the win and lose.

Genearlly, players need to make decisions from making ponds, collecting or stealing fish, selling, cooking or releasing fish, in order to make most money.

4)WHAT PLAYERS RECEIVED/ACTED IN THE PLAYTEST

1. The players did realize that they can steal and rob scramble fish and guard up ponds without our explanation. It actually cater to our expextation.
2. Some players have the consciousness to monitor or notice other players to steal and release fish. And they indeed stopped other players to stealing.
3. Cooking takes more time, but most players still choose to cook but not just sell the fish directly.
4. Players are not caring too much about the seaweed numbers.
5. The players did not realise there is a bonus and punishment afetr the end of the game, which would influence the players' behaviors and win or lose.

5) NOTES AND FEEDBACK FOR IMPROVEMENT

5-1 For Rule Sheet

1. The guarding mechanic is unclear — players don't understand why they need to guard.
2. The "Throw back to sea" icon is unclear — players don't know where to release the fish.

5-2 For The Game

1. Player Board and timer is too small. Some players suggest moving each player's score to the four corners of the screen.
2. The small resource icon above the player is also too small, not easy to be seen.
3. Players are unsure whether they share a pond or build their own. Maybe put a flap to show the ownership of the ponds would be helpful.
4. Players want to place ponds freely rather than in fixed locations. Adding the function that makes players be able to move the ponds would be considered.
5. Players forget they can sell raw fish directly for a shorter turnaround — they assume they have to cook before selling. And some players didn't realize that after they cook one fish they need to sell it before conducting the next cooking. Cooking before seeling should be allowed maybe?

5-3 Progress for Future

1. Adding the system of selling price changing, so we can observe when the players would sell fish. We asume that some players would observe the price changing and only sell the fish when the price is high.
2. Another prograss is adding more types of ponds, different ponds generate different fish with different selling price.
